

QqueryAI

Search smarter, not harder

Why QqueryAI?

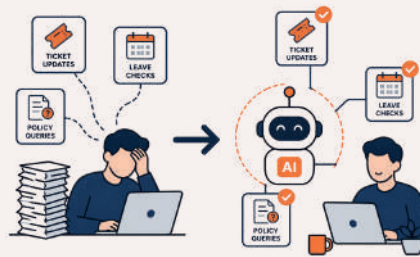

Modern enterprises are drowning in data spread across documents, systems, and departments. Finding the right information takes too long, costs too much, and slows every decision. QqueryAI is an AI-powered enterprise search and automation platform that delivers precise answers, automates routine queries, and puts your organizational knowledge to work instantly.

Common Workplace Problems QqueryAI Solves

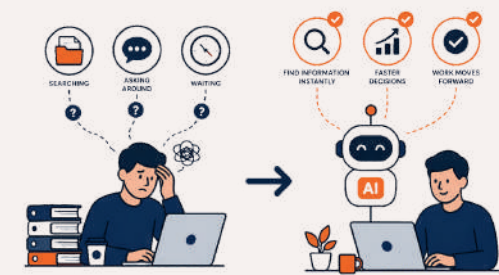

Reduce Information Overload

When data is scattered across systems and folders, finding anything becomes a task in itself. QqueryAI organises it all in one place, so employees spend time using information rather than hunting for it.

Automate Manual Processes

Routine tasks like ticket updates, leave checks, and policy queries consume time that could be spent elsewhere. QqueryAI handles these automatically, so your team stays focused on work that actually matters.

Improve Productivity

When people find information quickly, decisions happen faster and work moves forward. QqueryAI removes the delays that come from waiting, searching, and asking around.

Core Features

Knowledge Search

Instantly retrieve accurate information from across your enterprise knowledge base using AI-powered smart search. The right answer, not a list of links.

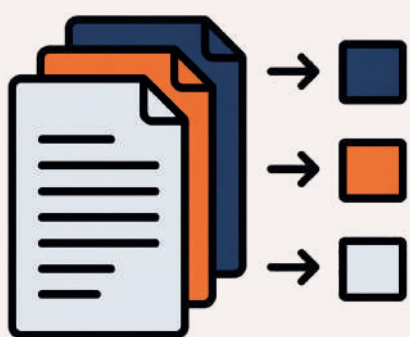

Natural Language Understanding (NLU)

Ask questions in plain English. QqueryAI interprets intent, not just keywords, making enterprise data accessible to every user without technical training.

Conversational AI

Interact with organizational data through a natural chat interface. Ask, follow up, and receive context-aware responses in real time.

Document Summarization

Condenses lengthy documents into concise, actionable summaries. Reduces hours of reading to seconds of insight.

AI-Powered Insight Generation

Analyzes enterprise data at scale to surface meaningful, unbiased insights for faster, data-driven decisions.

Role-Based Access Control (RBAC)

Three-tier role structure (User, Admin, Super Admin) ensures only authorized personnel access specific data. Reinforces data privacy and compliance across the organization.

Business Essentials

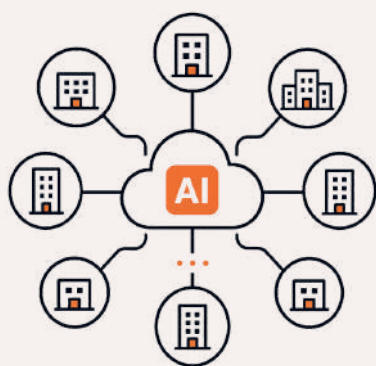

Workspace Configuration

Teams across HR, Finance, Legal, and other departments can each have a dedicated workspace with their own data and settings, all running under one platform.

Self-Service Portal

When employees can find answers on their own, IT and support teams spend less time on routine queries and more time on work that actually needs them.

Enterprise Deployment

QweryAI is built to grow with your organization. Whether you are starting with one department or expanding across the entire business, it handles more users, departments, and data without performance loss.

Real-Time Analytics

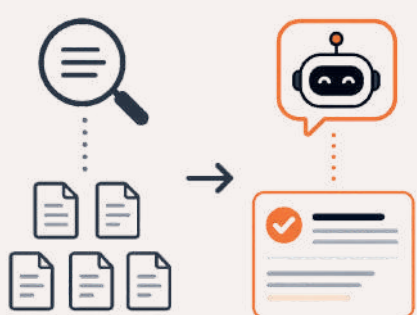

Connect QweryAI to your live business systems and generate MIS reports on demand by simply asking a question. Check leave status, track vendor payments, and review daily operations instantly.

Built-in Guardrails

Every interaction on QweryAI is governed by security policies and access controls. Organizations can be confident that AI usage stays compliant, controlled, and fully auditable.

Unique to QweryAI

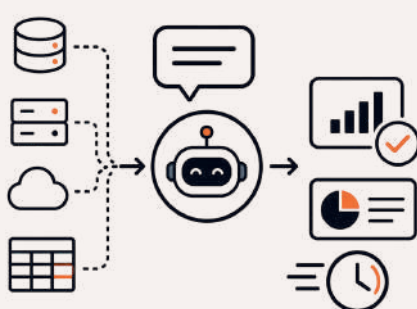

Direct Answer Engine

Where other search tools return a pile of documents to dig through, QweryAI reads them and hands you one clear answer. The difference in time saved is noticeable from day one.

Multi-Workspace Management

HR, Finance, Legal, and Operations can each have their own AI assistant trained on their specific data, while the organization manages everything from a single dashboard.

Live System Queries

Employees can ask questions about live business data in plain English and get answers immediately, with no need for dashboards, reports, or waiting on someone else to pull the numbers.

Agentic AI Capabilities

Built on AI agents and MCP servers, QweryAI streamlines complex workflows through a unified conversational interface; reducing manual effort, improving efficiency, and accelerating decision-making.
