

Secure Identity & Access Management

One Identity. Unlimited Possibilities.

SECURE • SIMPLE • SMART

ZTrust is a next-generation Identity & Access Management platform designed to secure digital identities, streamline access, and build trust across every interaction.

COMPLETE IAM • POWERFUL SECURITY • SEAMLESS EXPERIENCE

CLOUD | ON-PREM | HYBRID — WE'VE GOT YOU COVERED

Everything You Need. All In One Platform.

Identity & Access Management (IDAM)

Manage user identities and access securely, anytime with full control.

Single Sign-On (SSO)

One login to access all your applications securely, anytime and anywhere.

Multi-Tenancy Support

Secure apps from multiple organizations as multiple tenants seamlessly from a single platform

Multi-Factor Authentication (MFA)

Add layered security with OTP, Push Notification, Biometrics, security keys, and TOTP via QR.

Role-Based Access Control (RBAC)

Assign and manage access based on user roles to ensure the right level of permissions.

Admin Dashboard & Reports

Gain real-time insights, audit logs, and security analytics at your fingertips.

Self-Service Portal

Allow users to manage their accounts, devices, sessions, and access requests with ease.

Geo-Fencing

Restrict or allow access based on user location for enhanced security control.

Time-Fencing

Define access windows and enforce time-based security policies.

Encryption

Protect your data with advanced encryption, ensuring security at rest and in transit

Password Policies

Securely manage, reset, and enforce strong password policies across your organization.

Passwordless Authentication

Enable secure login using biometrics, OTP, or magic links—no passwords required.

Social Login

Enable login using Google, GitHub, LinkedIn, or other trusted identity providers.

Consent Management

Capture, track, and manage user consent to ensure regulatory compliance.

Built for Today. Engineered for Tomorrow.

ZTrust secures digital identities, simplifies access, and delivers seamless, trusted experiences across every interaction.

Why ZTrust?

- ✓ Your Advanced Identity Security
- ✓ Frictionless Access Experience
- ✓ Centralized Identity Control
- ✓ Compliance-Ready Architecture
- ✓ Enterprise-Grade Scalability

TRUST
MADE
SIMPLE

Enterprise Security, Built to Scale

Built on advanced protocols, flexible deployments, and intelligent policy enforcement—ZTrust seamlessly integrates and scales with your infrastructure.

Trusted

Scalable

Enterprise-Ready

From authentication protocols to deployment and database support—ZTrust delivers complete platform capabilities for enterprise identity and security.

Authentication Protocol

ZTrust supports industry-standard authentication protocols, enabling secure and seamless access across all applications—without compromising security or user experience.

OAuth 2.0

OpenID Connect (OIDC)

SAML 2.0

Mobile Device Management

Centralized mobile policy enforcement across all user devices, with real-time visibility into device status, activity, and security compliance—all from a unified control center.

Policy Enforcement

Compliance Alerts

Real-Time Visibility

Consent Management (DPDP Ready)

ZTrust delivers enterprise-grade consent management with full transparency, user control, and regulatory compliance. It enables application-level consent with structured governance and provides users with seamless access to view, manage, and withdraw consent through a secure self-service portal.

- Centralized consent control & tag-level enforcement
- Instant withdrawal via Self-Service Portal
- DPDP Act compliant audit trails
- Immutable Consent Records

★ Deployment Models

Deployment Flexibility

Deploy ZTrust across cloud, on-premises, and containerized environments—giving you the flexibility to align with your security and business needs.

Cloud

AWS · Azure · GCP

On-Premises

Full data sovereignty

Hybrid

Best of both worlds

Containerized

AWS EKS and ECS · Azure AKS ·
GCP Kubernetes · VM

Database Support

Supports leading enterprise databases, ensuring reliable performance, scalability, and data integrity.

MySQL

PostgreSQL

MariaDB

Oracle

SQL Server

ZTrust Authenticator

Experience the future of identity security with ZTrust's passwordless authentication—secure, seamless, and built for modern enterprises.

QR Codes

Scan, verify, and access—secure login made effortless with ZTrust Authenticator's unique QR codes in seconds.

NFC Authentication

Verify your identity instantly by tapping your registered NFC tag or card for seamless, secure access using ZTrust Authenticator.

One-Time Password (OTP)

Receive a unique, time-sensitive code via SMS or email to securely verify your login or transaction with ZTrust Authenticator.

TOTP (Time-Based One-Time Password)

Generate a secure, time-sensitive code in the ZTrust Authenticator app for fast and reliable two-factor verification.

mobile app push notification

Approve or deny login attempts instantly—authentication made simple with a single tap using ZTrust Authenticator.

Biometric

Verify your identity instantly with fingerprint using ZTrust Authenticator for fast, secure, and seamless access.

Available on the App Store and Google Play.

REGULATORY & CERTIFICATIONS

CERT-IN Certified

ZTrust SSO is CERT-In certified, helping meet security and procurement requirements for BFSI, government, and enterprise organizations.

DPDP Compliant

ZTrust is a DPDP-compliant platform that ensures secure, transparent, and consent-driven management of personal data.

GDPR Ready

Built-in audit trails, consent tracking, and access logs ensure GDPR compliance.
